for films. It also  
recommends  
the best tools  
for a job.**

### **materialManager Advanced**

**Proposes optimal parameters automatically on your saw, corresponding to your materials, tools and quality requirements.**

Anyone who has ever been responsible for cutting knows that consistent machining quality is not a given. A large variety of materials, multiple machine operators and different saws are just three of the potential daily challenges, along with questions such as: How can the tool life be increased? And how can workflows be made simple and efficient? materialManager Advanced gives you all-round support for these issues.

## Your benefits at a glance:

- ✔ **Efficient and simple machine use:** Based on your quality requirements and saw blades, your machine automatically adjusts itself correctly to the material — for optimal interaction of feed and saw blade projection, and potentially also speed, regardless of the respective machine operator.
- ✔ **Fewer sources of error:** Automatic adjustment of saw parameters when the material is changed. The machine operator is also warned if they are using an unsuitable tool.
- ✔ **Creates transparency:** By looking at the app, the user can easily see how the tool was used and when it needs to be sharpened.
- ✔ **Up to 8% performance potential:** Optimized feed speed at a defined processing quality.
- ✔ **Up to 20% lower tool costs:** Extended tool life thanks to optimal saw parameters.

## Special features:

- The software can be used for all saws from the 3 series.
- Authorized persons can adjust the settings at any time from the office via the web-based materialManager Advanced app.
- All machines with a materialManager Advanced license use identical settings, thereby ensuring quality.
- The recommended parameters can be readjusted at any time.
